Description

The present invention relates to a tray that can be held with one hand, which can securely retain items placed thereon and which can be stacked with other such trays.

Many different types of trays are known that are used to transport a plurality of items, for example drinks to and from tables in bars or restaurants. However, all such known trays suffer a number of disadvantages. One is that they are flat and must be held either by their edges or underneath, which means that carrying drinks can be precarious and require delicate balance, especially in crowded environments, such as the bars and restaurants that they are most commonly used. Also, holding the tray by the edges requires both hands to keep it as steady as possible, so does not leave the user with a free hand for any other purposes. Another disadvantage is the lateral dimensions of such trays. Usually they are wide, which means that they are vulnerable to knocks when being carried through crowds, and because they are flat, the drinks supported thereon have no means of lateral stabilisation to prevent them falling over if they are subjected to a knock.

Therefore, there exists a need to provide a tray to carry a plurality of drinks easily, with one hand, and with which the drinks being transported are less vulnerable to spillage or falling over, to substantially alleviate or overcome the problems mentioned above.

According to the present invention therefore, there is provided a tray having a handle portion and a peripheral base surrounding the handle portion to support items placed on the tray, the handle portion protruding upwardly from the peripheral base and comprising a hollow post, the base portion having an aperture in the centre thereof such that the hollow interior of the post is accessible from the underside of the base through said aperture, the post being dimensioned to receive the post of the handle of another corresponding device to enable a plurality of such devices to be stacked together

- 2 -

In a preferred embodiment, the base has a wall extending substantially vertically upwards from the perimeter of the base to prevent items from falling off the base.

- Preferably, the handle portion further comprises a post extending vertically upwards from the centre of the base and a lifting bandle located at the top of said post.

 Advantageously, the top of the post is vertically higher than the top of the wall, and the post preferably tapers inwardly towards its top.
- Preferably, the top of the post has an aperture therein. In a preferred embodiment, the lifting handle comprises a circular hoop portion, a shaft portion connected to the hoop portion, and a snap-fit connection on the other end of the shaft distal from the hoop, the snap-fit connection conveniently comprising a plurality of resiliently deformable arms extending parallel to each other in the axial direction of the shaft, an end of each arm distal from the shaft having a projection extending laterally outwards from the arm.

The hoop portion, the shaft and the snap-fit connection means are prefcrably all integrally formed. Conveniently, the base portion is circular, and the post is prefcrably also circular in cross-section.

A preferred embodiment includes a rotatable collar between the post and the lifting handle. Conveniently, the collar has a central aperture therethrough to receive the shaft of the lifting handle to retain the collar in position between the post and the lifting handle. Preferably, the collar has markings on the outer surface thereof and is preferably circular.

In a preferred embodiment, the base portion has a plurality of feet on the underside thereof, which are conveniently formed integrally with the base.

25

20

-7-

Claims

1. A tray having a handle portion and a peripheral base surrounding the handle portion to support items placed on the tray, the handle portion protruding upwardly from the peripheral base and comprising a hollow post, the base portion having an aperture in the centre thereof such that the hollow interior of the post is accessible from the underside of the base through said aperture, the post being dimensioned to teceive the post of the handle of another corresponding device to enable a plurality of such devices to be stacked together.

10

- A tray according to claim 1 wherein the base has a wall extending substantially vertically upwards from the perimeter of the base to prevent items from falling off the base.
- 15 3. A tray according to claim 1 or claim 2 wherein the handle portion further comprises a lifting handle located at the top of said post.
 - 4. A tray according to claim 3 wherein the top of the post is vertically higher than the top of the wall.

20

- 5. A tray according to claim 3 or claim 4 wherein the post tapers inwardly towards its top.
- 6. A tray according to any of claims 3-5 wherein the top of the post has an aperture therein.
 - 7. A tray according to any of claims 3-6 wherein the lifting handle comprises a circular hoop portion, a shaft portion connected to the hoop portion, and a snap-fit connection on the other end of the shaft distal from the hoop.

30

8. A tray according to claim 7 wherein the snap-fit connection comprises a plurality of resiliently deformable arms extending parallel to each other in the axial

Ţ

-8-

direction of the shaft, an end of each arm distal from the shaft having a projection extending laterally outwards from the arm.

- 9. A tray according to claim 7 or claim 8 wherein the hoop portion, the shaft and the snap-fit connection means are all integrally formed.
 - 10. A tray according to any preceding claim wherein the base portion is circular.
- 11. A tray according to any preceding claim wherein the post is circular in cross-
 - 12. A tray according to any of claims 7-11 including a rotatable collar between the post and the lifting handle.
 - 15 13. A tray according to claim 12 wherein the collar has a central aperture therethrough to receive the shaft of the lifting handle to retain the collar in position between the post and the lifting handle.
 - 14. A tray according to claim 12 or claim 13 wherein the collar has markings on the outer surface thereof.
 - 15. A tray according to any of claims 12-14 wherein the collar is circular.
 - 16. A tray according to any preceding claim wherein the base portion has a plurality of feet on the underside thereof.
 - 17. A tray according to claim 12 wherein the feet are formed integrally with the base.
 - 30 18. A tray according to any preceding claim wherein the base, the post and the wall are all formed as one unitary component.

-9-

- 19. A tray according to any of claims 1-6 wherein the entire tray is formed as one single unitary component.
- 20. A tray according to claim 18 or claim 19 wherein the unitary component is moulded.
 - 21. A tray according to any preceding claim made from plastic, glass, a wood derivative or resin.
- 10 22. A tray according to any of claims 1-19 wherein the tray is made from metal, wood or a wood derivative.
 - 23. A tray substantially as described herein with reference to the accompanying drawings.

15
